

Response to Office Action Mailed October 17, 2005  
Patent 09/878,009

1. **(Currently Amended)** A method of accessing one or more computer files via a graphical icon a computer file having information content and invoking an application for manipulating the information content of the accessed computer file, comprising the steps of:

capturing one or more graphical representations of one or more portions of information content of one or more computer files while an application is manipulating the one or more computer files;

creating an icon including selected portions of the captured one or more graphical representations of the information content of the one or more computer files corresponding to a computer file having information content, wherein the icon substantially depicting graphically depicts at least a portion of the information content from the one or more computer file files;

linking the icon to an the application and to the one or more computer files that is separate from the computer file and adapted to manipulate the information content of the computer file;

storing the icon in memory;

displaying the icon;

Invoking the application for manipulating the information content of the one or more computer file files upon selection of the icon and opening the one or more computer files file within the application.

2. **(Canceled).**

3. **(Canceled).**

Response to Office Action Mailed October 17, 2005  
Patent 09/878,009

4. **(Currently Amended)** The method of claim 3, wherein capturing a graphical representation is initiated by a user input command while the application manipulating the one or more computer files ~~are~~ file is active.

5. **(Original)** The method of claim 4, wherein the user input command is a keyboard command.

6. **(Currently Amended)** The method of claim 1, further comprising the step of storing information related to the application for manipulating the one or more computer files ~~file~~ in a memory along with the icon.

7. **(Original)** The method of claim 1, further comprising the step of displaying the icon in a window on a screen display.

8. **(Original)** The method of claim 7, further comprising the step of displaying the window when a cursor is positioned at an edge of the screen display.

9. **(Original)** The method of claim 8, further comprising the step of concealing the window when the cursor is positioned outside the window.

10. **(Currently Amended)** The method of claim 1, wherein the step of invoking the application ~~for manipulating the information content of the computer file upon selection of the icon and opening the computer file within the application consists of~~ comprises invoking the application and opening the one or more computer files ~~file~~ upon a single user input command selecting the icon.

11. **(Original)** The method of claim 10, wherein the single user input command comprises depressing a button when a cursor is placed over the icon.

Response to Office Action Mailed October 17, 2005  
Patent 09/878,009

12. **(Original)** The method of claim 11, wherein the button is a mouse button and the cursor is a mouse-driver cursor.

13. **(Currently Amended)** The method of claim 1, wherein if an application is active then the step of invoking the application ~~for manipulating the information of the computer file upon selection of the icon and opening the computer file within the application~~ comprises accessing the active application.

14. **(Currently Amended)** The method of claim 1, further comprising the step of storing data related to the one or more computer files file and the corresponding application each time the one or more computer files file and application is opened and closed during a session, and wherein the step of invoking the application ~~for manipulating the information content of the computer file upon selection of the icon and opening the computer file within the application~~ comprises Invoking the one or more computer files file and the application based on the stored data related to the one or more computer files file and corresponding application.

15. **(Currently Amended)** The method of claim 14, wherein the data related to the one or more computer files file and the corresponding application includes a document path, a document handle, and application path, and an application handle.

16. **(Currently Amended)** The method of claim 1, wherein the step of invoking the ~~computer file and the corresponding application for manipulating the~~

Response to Office Action Mailed October 17, 2005  
Patent 09/878,009

~~information of the computer file upon selection of the icon and opening the computer file within the application~~ further includes printing the computer file.

17. **(Currently Amended)** The method of claim 1, wherein the step of invoking the application ~~for manipulating the information content of the computer file upon selection of the icon and opening the computer file within the application~~ comprises copying the one or more computer files file to designated storage device.

18. **(Currently Amended)** The method of claim 1, wherein the step of creating an icon ~~corresponding to a computer file having information content, the icon substantially depicting at least a portion of the information content from the computer file~~ comprises creating an icon corresponding to a template file.

19. **(Previously Presented)** A method for providing a user interface for accessing a file based on a corresponding icon comprising:

storing a plurality of icons in a memory along with a corresponding plurality of references to an underlying file system for storage information for a plurality of files, each icon having an appearance substantially depicting information content from its corresponding file;

linking an application to each icon based utility on the ability of the application to manipulate the information content of the file corresponding to the icon;

providing a window on a display screen for displaying the plurality of icons;

Response to Office Action Mailed October 17, 2005  
Patent 09/878,009

invoking the application for manipulating the information content of the file corresponding to the selected icon upon selection of an icon from the plurality of icons in the window;

accessing the file designated by the reference to the underlying file system corresponding to the selected icon; and

opening the accessed file into the corresponding application.

20. **(Previously Presented)** The method of claim 19, wherein the step of storing a plurality of icons in a memory further comprises storing data related to an application for manipulating the corresponding file along with each of the plurality of icons and wherein the step of invoking the application corresponding to the selected icon comprises invoking an application based on the corresponding stored data related to the application.

21. **(Original)** The method of claim 20, further comprising providing a user interface for accepting a user input command to initiate storing an icon in a memory along with a corresponding reference to the underlying file system for storage information for the file.

22. **(Original)** The method of claim 21, wherein the user input command is a keyboard command.

23. **(Original)** The method of claim 19, wherein one of the plurality of icons substantially depicts a display of the corresponding file while the file is being manipulated by the application.

Response to Office Action Mailed October 17, 2005  
Patent 09/878,009

24. **(Original)** The method of claim 19, wherein the step of providing a window for displaying the plurality of icons comprises providing a plurality of windows.

25. **(Original)** The method of claim 19, wherein the step of invoking the application further includes printing the file

26. **(Original)** The method of claim 19, wherein the step of invoking the application comprises copying the file to a designated storage device.

27. **(Previously Presented)** A method of using icons to switch between a plurality of files having information content and corresponding applications for manipulating the content of the files on a computer having a file system and an operating system user interface to the files within the file system, the icons being references to the files separate from the operating system user interface to the files within the file system, the method comprising:

creating and storing an icon for each of the plurality of files along with data relating an application for manipulating the information content of the file to the file associated with the icon and data referencing a storage location of the file within the file system;

selecting an icon from the window;

invoking the file and the application for manipulating the information content of the file corresponding to the selected icon based on the data related to the application and the data referencing the storage location of the file; and  
opening the file with in the application.

Response to Office Action Mailed October 17, 2005  
Patent 09/878,009

28. **(Previously Presented)** The method of claim 27, wherein the icon substantially depicts information content from the file.

29. **(Original)** The method of claim 27, further comprising the steps of providing a window for displaying the icons and displaying the window based on a user-initiated display action.

30. **(Original)** The method of claim 29, wherein the step of displaying the window comprises displaying the window based on movement of a cursor to a predefined screen location.

31. **(Original)** The method of claim 30, wherein movement of a cursor to a predefined screen location comprises movement of a cursor to an edge of a screen.

32. **(Original)** The method of claim 30, further comprising concealing the window based on movement of the cursor to a second predefined screen location.

33. **(Original)** The method of claim 27, wherein the step of selecting an icon from the window comprises placing a cursor over the icon and depressing a button.

34. **(Original)** The method of claim 33, wherein placing a cursor over an icon and depressing a button comprises placing a mouse-driven cursor over an icon and depressing a mouse button.

Response to Office Action Mailed October 17, 2005  
Patent 09/878,009

35. **(Original)** The method of claim 27, wherein if an application is active then the step of invoking the file and the application for manipulating the file comprises accessing the active application.

36. **(Original)** The method of claim 27, wherein the step of invoking the file and the application for manipulating the file further includes printing the file.

37. **(Original)** The method of claim 27, wherein the step of invoking the file and the application for manipulating the file comprises copying the file to a designated storage device.

38. **(Original)** The method of claim 27, wherein the applications include at least two of a word processor, a database program, a spreadsheet program, and a drawing program.

39. **(Previously Presented)** A method for providing a template file for access outside an application comprising:

storing a file to be manipulated by an application as a template file along with an icon corresponding to the template file and data relating the application used to manipulate the information content of the template file to the file for the icon;

marking the template file as read-only;

displaying the icon outside the application;

invoking the template file and the application used to manipulate the information content of the template file when the icon is selected;

opening the template file within the application.

Response to Office Action Mailed October 17, 2005  
Patent 09/878,009

**40. (Previously Presented)** The method of claim 39, wherein the icon substantially depicts information content from the template file.

**41. (Previously Presented)** The method of claim 40, wherein the icon substantially depicts a display of the template file while the template file is being manipulated by the application.
